

ST. MORITZ SAFE

August Safety Blast

REACTIVE VS. PROACTIVE - BE PROACTIVE!

Are you Proactive or Reactive in managing your locations potential accidents or injuries?

Proactive leaders anticipate problems before they occur and actively seek resolutions.

This is in contrast to reactive leaders, who might spend more time focusing on a “wait and see” approach.

By conducting site inspections and observing your employee's daily roles, we can modify potentially hazardous behavior and conditions preventing unnecessary injuries and accidents.

Please help in making St. Moritz a Proactive leader in reducing unnecessary accidents by identifying and correcting hazards and hazardous behavior.
